

Project Management

Delivering your Virtualisation Project

Castle Computer Services' own Project Managers are used throughout any project. This is to ensure projects are planned thoroughly, project resources are managed, progress is evaluated and to take the necessary action to keep the project on course.

The Castle Project Methodology is all about working in partnership to achieve the goals of the client; delivering the project on time and on budget.

We also fully understand that the show must go on and are sympathetic to the customer's need to keep existing systems running during this implementation. We would recommend that certain key players are identified who will be able to concentrate on the project, over and above day-to-day duties.

Adequate resources must be allocated at the outset to deal with all the activities in the new project without starving other areas of the business required to continue existing operations. Our collaborative approach will ensure a smooth implementation and a maximised return on investment over the lifetime of the installed equipment.

THE PROCESS

Step 1 - Capacity Planning

Step 2 - Site Survey

Step 3 - Project Initiation

Step 4 - Pre Install & Software Installation

Step 5 - Delivery & Commissioning

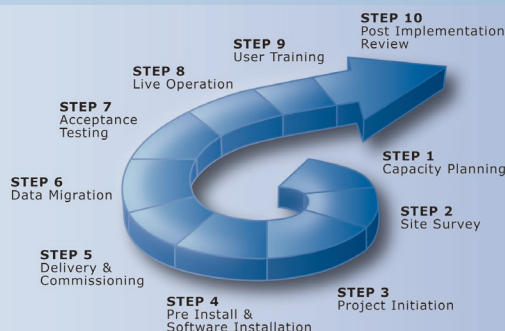

Step 6 - Data Migration

Step 7 - Acceptance Testing

Step 8 - Live Operation

Step 9 - User Training

Step 10 - Post Implementation Review
